INSTAKEY

SecurityRecords.com®
Key Management Software

Make Key System Management Sustainable

As mechanical lock and key systems continue to be the first line of defense and provide a specific security need, it's time the information management of these systems becomes more easily accessible. No matter what lock and key system you have, InstaKey's SecurityRecords.com® can help.

This patented cloud-based SaaS technology modernizes the way key systems can be managed. SecurityRecords.com® is specifically designed to give visibility into the inner functions of a key system in a way that paper files, spreadsheets and PC-based software can't.

Visualize

How the entire key system is operating - dashboard tracking of frequencies, orders, supplier turnaround times, along with product and freight costs.

Manage

What keys have been made and which locks have been changed, how often, and why - allowing organizations the opportunity to improve procedures around key management and costs.

Investigate

What key, what specific locations and doors it accesses, who is responsible for it and what is affected. Track keys to key holders and perform audits.

Know

Who has access to the data and what record modifications have been made - creating tighter controls and improving accuracy and accountability.

Digital Tools to Save Time, Money, and Enhance Security

Key Audit
Audit keys without having to be on-site. Use email or text messaging to send blind audits or listed audits.

Site Survey
Snap hardware photos and send them to InstaKey for review & conversion advice - without the locksmith fees.

Key Holder Update
Assign keys, get key receipt sign-off and update key holder records remotely.
