

A.I.L. INSTRUCTIONS

Start in one corner and place a piece of duct tape on the diagonal. The tape should be long enough to hang over each edge of the paper by about one inch.

(Don't worry if the tape sticks to the table. You can peel it off later.)

Keep adding strips of tape with each one overlapping the one before it.

Turn the paper over. Use a ruler to draw a line about half an inch from the edge of one long side.

Cut on the line.

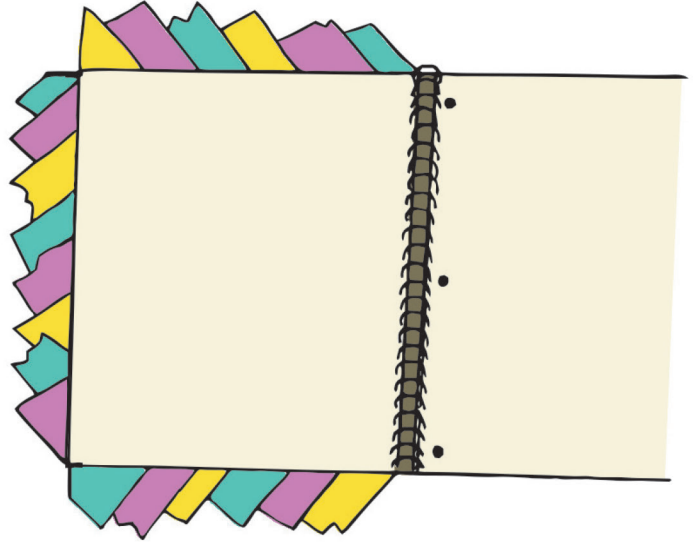

Carefully lay the taped paper on the notebook cover with the straight edge near the spiral (but not touching it) and with some tape hanging off all three of the other sides.

A.I.L. INSTRUCTIONS

Open the notebook cover.

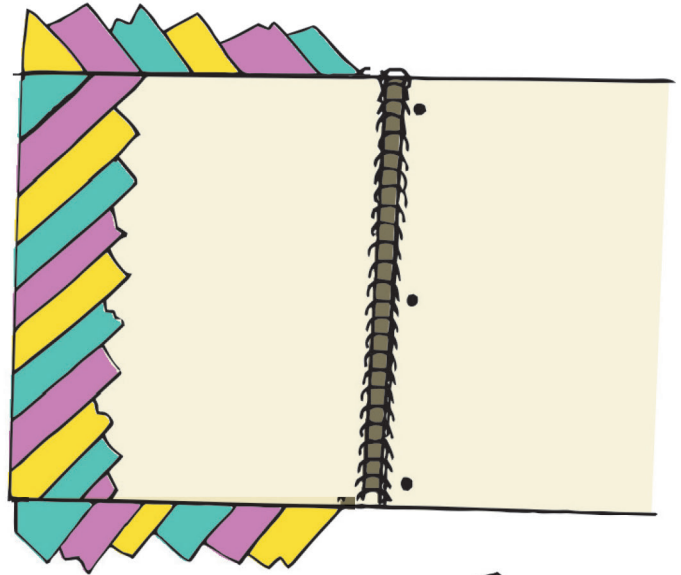

Cut away the tape and paper in the corners.

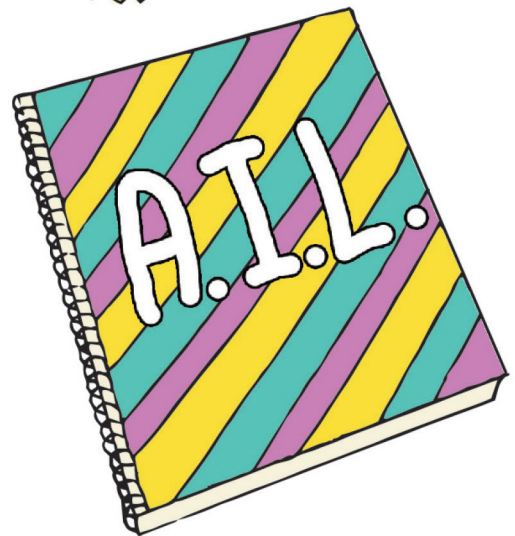

Fold the duct tape over the long edge of the notebook.

Press firmly.

Do the same with the top and bottom.

Kids may make tape letters to spell A.I.L. on the covers, or they can use broad markers to write A.I.L.

Instructions:

Familiarize yourself with these instructions in order to help kids assemble the covers of their A.I.L. (Actionable Intel Logs) in Meeting 1, Application #2.
